

Get Your Warehouse Connected
with the Next Generation of
Commercial Door Operators from
LiftMaster.

LiftMaster

Stay Connected and In Control of Your Doors No Matter Where You are with MyQ Technology.

Exclusive Technology

MyQ® Technology provides revolutionary technology only found in LiftMaster Logic 5.0 Commercial Door Operators.

Easy Setup

Connect easily to the internet via your current business network.

MyQ Mobile App

- Download the FREE MyQ Mobile App and easily register your account at MyLiftMaster.com.
- Enables secure monitoring and control of the operator with a smartphone, tablet or computer.
- Alerts can be received as email or pop-up (push) notifications on a mobile device, ensuring the status of your commercial door.

No Fees

Requires no annual activation fee.

Control Warehouse Doors Remotely.

Whether You Need Trolley or Hoist Operators, we Offer Innovative Industry-Proven Solutions.

Jackshaft Operator

Optimal for industrial applications. Doors used with this operator should be balanced with the ability to be manually lifted by hand in an emergency or power outage.

Trolley Operator

Optimal for general industrial applications with sectional overhead doors.

Hoist Operator

Optimal for industrial applications. Include a floor level chain hoist to ease manual operation in an emergency or power outage.

LiftMaster® Operators Come Standard with These Advanced Features:

MyQ Technology:

- Provides revolutionary technology only found in LiftMaster Commercial Door Operators.
- Enables secure monitoring and control of the operator with a smartphone, tablet or computer.
- Each Internet Gateway device (828LM) can manage up to 16 operators or devices. Multiple internet gateways may be installed to accommodate additional commercial devices.

Built-in Security+ 2.0® Radio Receiver:

- Provides industry leading technology only found in LiftMaster Commercial Door Operators.
- Increased security – with every click, a new code is sent to the commercial door operator ensuring the door opens only for the individual pressing the remote.
- Enhanced radio communicates with tri-band frequency to improve range and reduce interference – assuring the door opens, stops and closes conveniently and reliably every time.

Timer-to-Close

- Provides functionality for the operator to automatically close the door as soon as vehicles are clear, eliminating the potential for theft and damage, keeping your warehouse secure while you're away.
- Reduces loss of energy associated with heating and cooling.

Maintenance Alert System

- Provides reminder to contact your LiftMaster Dealer for routine maintenance.
- System can be set to alert upon a calendar date or after a selected number of operator cycles.

LiftMaster Accessories Enhance Safety and Efficiency.

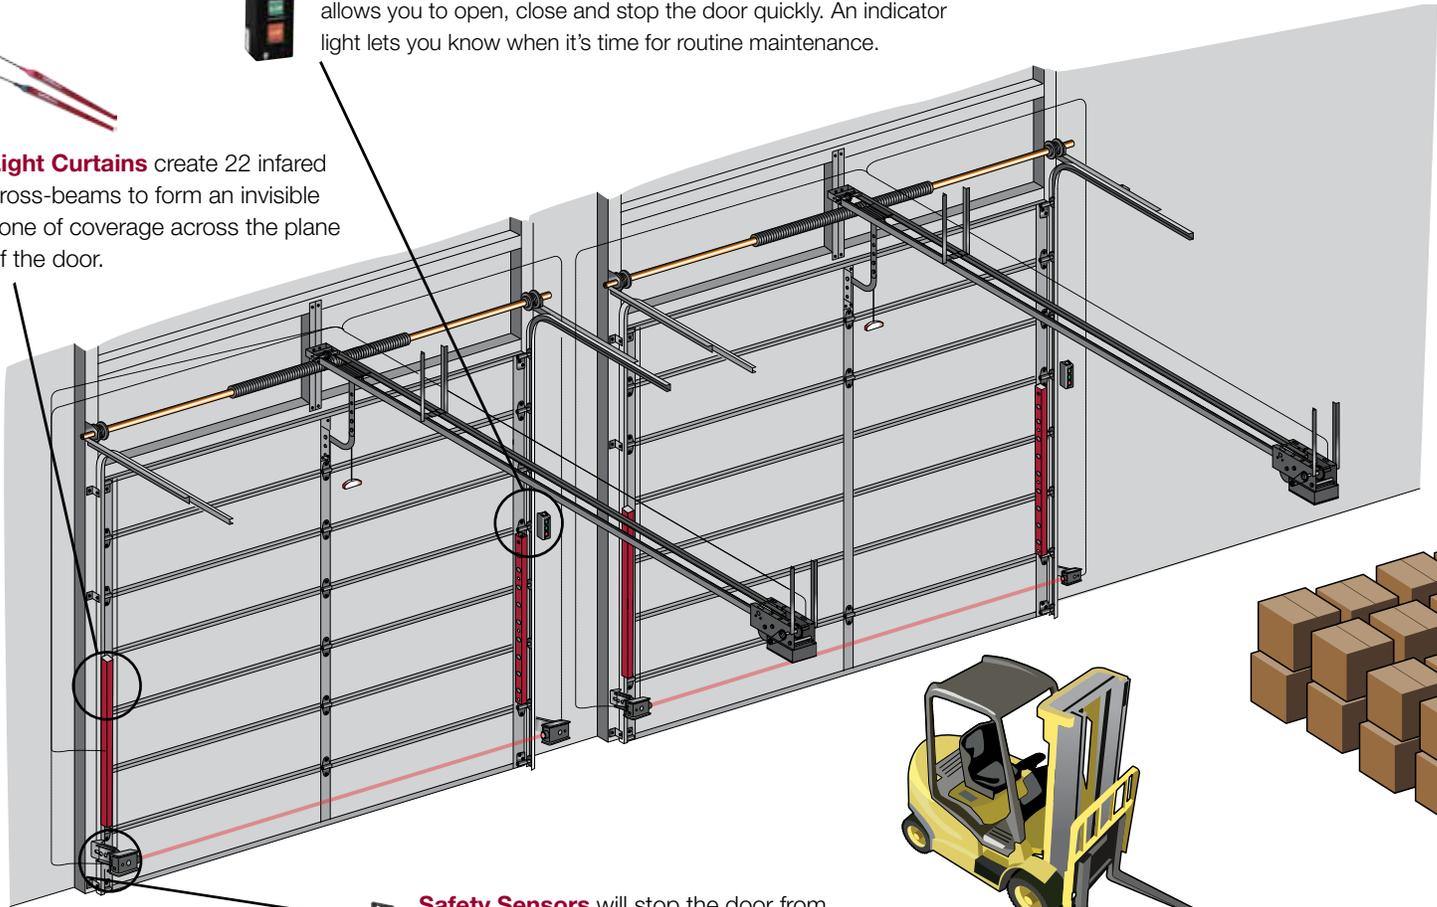

3-Button Station with Maintenance Alert System

allows you to open, close and stop the door quickly. An indicator light lets you know when it's time for routine maintenance.

Light Curtains create 22 infrared cross-beams to form an invisible zone of coverage across the plane of the door.

Safety Sensors will stop the door from closing if an obstruction is detected, protecting personnel, vehicles, aerial ladders and other high apparatus obstructions.

Why Automate Your Commercial Doors?

- ✓ Assures commercial doors cannot be manually opened from the outside by someone trying to gain access to commit a theft, preventing loss of inventory.
- ✓ Increases the life expectancy of the door and reduces service costs associated with ensuring proper operation of commercial doors. Commercial door operators open and close doors in a controlled manner eliminating the potential for doors to raise too quickly or slam when being closed.
- ✓ Reduces the opportunity for a soft tissue injury to occur when opening or closing a commercial door manually, preventing workplace injury claims, loss of time and potential increased insurance premiums.

We've Met with Warehouse Management Professionals to Discuss Their Access Needs.

In response to your needs, we've created solutions specifically for you. LiftMaster® understands your primary concerns center around safety, security, convenience and energy savings when it comes to commercial door spaces in your warehouse. Imagine being able to see which of your dock doors are open or closed without being in the warehouse. LiftMaster's MyQ® Technology delivers the industry's first internet-enabled commercial door operator, which allows you to securely monitor and control your commercial dock doors with a smartphone, tablet or computer.

LiftMaster's Warehouse Solutions are integrated packages; assuring seamless integration of a motorized commercial door system. The combination of advanced technology, features and accessories provided by LiftMaster, simplifies the process of determining the best solution to meet the needs of your facility.

“Needing a better way to automate and control a number of commercial warehouse doors, a Warehouse Manager in San Diego, California, incorporated LiftMaster's exclusive MyQ Technology with outstanding results.

One of the challenges managing multiple heated and cooled warehouses is when commercial doors are left open, the energy costs can add up quickly. Since I can't be in every location at the same time, MyQ Technology allows me to monitor all locations simultaneously, which saves money while keeping our facilities safe and secure.”

3 EASY STEPS TO CONFIGURE YOUR COMMERCIAL DOOR OPERATOR SYSTEM

STEP 1 SELECT OPERATOR MODEL TYPE

- J: Jackshaft
- H: Hoist
- GH: Gearhead Hoist
- T: Trolley

STEP 2 SELECT ENTRAPMENT PROTECTION DEVICES

Effective August 2010, Underwriters Laboratories (UL), the leading independent, not-for-profit product safety testing and certification organization, mandated that all commercial door operators bearing the UL label must be equipped with constant pressure to close functionality or continuously monitored safety devices, such as photo sensors or sensing edges, that will detect and reverse the door if a person or object enters the path of the door when closing.

LiftMaster offers a variety of entrapment protection devices such as:

- CPS-U: Photo Eye, Standard
- CPS-UN4: Photo Eyes, NEMA 4
- CPS-OPEN4: Photo Eye, NEMA 4X, Flexible
- OES: Optical Edge System
- CPS-RPEN4: Photo Eye, NEMA 4X, Reflective
- CPS3CARD: To monitor second entrapment protection device

If photo eyes are selected as the primary entrapment protection device, they must be installed no greater than six (6) inches or above the ground. A second set of photo eyes is recommended to be installed above six inches to detect vehicles with higher ground clearance moving through a door space.

STEP 3 SELECT ACCESSORIES

- 811LM: Universal DIP Single-Button Remote Control
- 813LM: Universal DIP 3-Button Remote Control
- 893MAX: 3-Button Remote Control
- 829LM: Door and Gate Monitor*
- 828LM: Internet Gateway
- 823LM: Remote Light Switch*
- 825LM: Remote Light Control*
- RGL24LY: Red/Green Traffic Light
- RGL-CTL: High Intensity LED Traffic Light
- 02-401M: Mushroom Button Control Station
- TLS1CARD: Plug-in Interface Card for Timer/Light Control
- LC-36A: Light Curtains
- 50-HERK2: Motion Detector (Recommended for use with 50-HERK-RC2 Remote Control)
- 02-111: Pull Switch Control
- 50450: Interlock Switch for Sectional Doors

*MyQ® accessory, requires Internet Gateway
